**Maya Hickmann : Children's Discourse: Person, Space and Time across Languages (Cambridge Studies in Linguistics)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Children's Discourse: Person, Space and Time across Languages (Cambridge Studies in Linguistics):

Psycholinguist Maya Hickmann presents an original comparative study of discourse development in English, French, German, and Chinese. Hickmann discusses the main theoretical issues in the study of first language acquisition and provides a wide review of available studies in three domains of child language: person, space and time. Her findings concern the rhythm of language acquisition, its formal and functional determinants, and its universal vs. language-specific aspects. The conclusions stress the importance of relating sentence and discourse determinants of acquisition in a crosslinguistic perspective.

of the hardback: '... this book remains one of the most impressive in the field of language acquisition. The richness of the data from four different languages is truly striking, and linguists in almost any subfield of linguistics are guaranteed to learn much of value from this book.' LinguisticsAbout the AuthorMaya Hickmann is Research Director at Laboratoire Cognition et Développement, Centre National de la Recherche Scientifique and University of Paris V.
