Larry Browning, Alf Steinar Stre, Keri K. Stephens, Jan-Oddvar Srnes : Information and Communication Technologies in Action: Linking Theories and Narratives of Practice (Routledge Communication Series) before purchasing it in order to gage whether or not it would be worth my time, and all praised Information and Communication Technologies in Action: Linking Theories and Narratives of Practice (Routledge Communication

Series):

This book combines 20 stories from a variety of organizations with a selection of nine theories, both mainstream and emerging. The stories introduce readers to individuals talking about how they communicate today via information and communication technologies (ICTs) in business or organizational contexts. The theories, presented in accessible language, illuminate the implicit patterns in these stories. This book demonstrates how and why these technologies are used under myriad circumstances.

"This is the communication technology book I've been waiting for. It combines concise summaries of nine major theories with rich ethnographic descriptions of classic real-world organizational problems that pull the theories down to Earth. The problems cut across the theories and vice-versa, creating lots of flexibility for engaging the material in class." -Steven R. Corman, Professor Hugh Downs School of Human Communication Arizona State University "I find this book excellent for teaching students the role of ICTs in organizational communication. The cases provide a wide range of interesting, practical experiences for students to discuss, and the conceptual chapters provide readable yet sophisticated introductions to theories that enable students to understand the issues in novel and more complex ways." - Ted Zorn, Professor of Management-Communication University of Waikato, New Zealand "Understanding the individual, organizational, technological, social, and cultural complexity of ICTs requires both a wide range of theoretical perspectives, and a wide range of actual situations. This book provides both, through rich personal narratives of applying ICTs in a fascinating array of sites, including Norwegian fish farming, international financial services, rural family histories, media-enhanced courses, individual entrepreneurs, and pathology physicians." -Ronald E. Rice, Arthur N Rupe Professor of Communication University of California Santa Barbara "I have read Information and Communication Technologies in Action and think that it represents a terrific combination of theory and practice. Plus, it is very readable! Who could ask for more? I congratulate the authors on writing a very important book." - Everett M. Rogers, Professor of Communication and Journalism, University of New Mexico In 1996, his book, "Diffusion of Innovations," was selected by Inc. Magazine as one of the ten classic books in business. About the Author Larry D. Browning, (Ph.D. Ohio State University) is a professor of organizational communication and the John T. Jones Centennial Fellow in Communication in the Department of Communication Studies at the University of Texas at Austin. His research interests include the role of lists and stories in organizations, information and communication technologies (ICTs) and narratives, cooperation and competition in organizations, and grounded theory as a research strategy. Alf Steinar Stre (Ph.D. University of Texas at Austin) is an associate professor in the department of industrial economics and technology management at The Norwegian University of Science and Technology. His research interests include ICTs, organizing, communication, information management, innovation, and new venture creation. Keri K. Stephens (Ph.D. University of Texas at Austin) is an assistant professor in the Department of Communication Studies at the University of Texas at Austin. Her research focuses on how people use ICTs at work. Jan-Oddvar Srnes, (Ph.D. Norwegian University of Science and Technology) is an Associate Professor and Vice Dean at Bod Graduate School of Business, Norway. Jans research focus is on organizational communication, specifically how ICTs are used in organizations.
