World Health Organization : International Classification of Functioning, Disability and Health (ICF): Large Print Format for the Visually Impaired before purchasing it in order to gage whether or not it would be worth my time, and all praised International Classification of Functioning, Disability and Health (ICF): Large Print Format for the Visually Impaired:

THIS IS THE LARGE PRINT VERSION OF ICF FOR THE VISUALLY IMPAIREDInternational Classification of Functioning (ICF) is a classification of health and health-related domains that provides a standard language for describing how people live with their health condition. It covers body functions and structures, activities and participation, from both individual and societal perspectives. The ICF puts the notions of health and disability in a new light. Disability is not something that only happens to a minority of humanity. It acknowledges that every human being can undergo a decrement in health and thereby experience some degree of disability. The ICF thus mainstreams the experience of disability and recognizes it as a universal human experience. By shifting the focus from cause to impact, it places all health conditions on an equal footing allowing them to be compared using a common metricthe ruler of health and disability. Furthermore, ICF takes into account the social aspects of disability and does not see disability only as medical or biological dysfunction. It also takes into account the impact of the environment on the person's functioning. ICF is useful in understanding and measuring health outcomes. It can be used in clinical settings, health services or surveys at the individual or population level.In view of the differing needs of different types of users, ICF is presented in multiple formats and versions:**ICF Full Version**A conclusive volume with glossary definitions and full list of codes including all details. Available in all official WHO languages (Arabic, Chinese, English, French, Russian and Spanish).**ICF Pocket Version**The pocket size version contains main 2 level codes (max. 99 per list) for practical purposes.**ICF on CD-ROM**The CD-ROM includes ICF in 6 official WHO and other languages and provides the following functionality:

1. Allows browsing the classification in its tree structure
2. Can display two languages at the same time
3. Provides advanced search functions
4. Cross-references via hyperlinks
5. Allows the user to select and work on subsets of the classification
6. Internet based upgrading facility which allows incorporating future modifications in the classification and additional language versions
7. Allows user to send comments and feedback to WHO

ICF Full version in Large Print (for the visually impaired)

About the AuthorWorld Health Organization is a Specialized Agency of the United Nations, charged to act as the world's directing and coordinating authority on questions of human health. It is responsible for providing leadership on global health matters, shaping the health research agenda, setting norms and standards, articulating evidence-based policy options, providing technical support to countries, and monitoring and assessing health trends.
