DARIUSCH ATIGHETCHI : Islamic Bioethics: Problems and Perspectives (International Library of Ethics, Law, and the New Medicine) before purchasing it in order to gage whether or not it would be worth my time, and all

praised Islamic Bioethics: Problems and Perspectives (International Library of Ethics, Law, and the New Medicine):

This book presents a critical analysis of the debate in Muslim countries at the religious, legal and political level, sparked by the introduction of new biomedical technologies such as cloning, genetics, organ transplants and in vitro fertilisation. The book draws on law, sociology, anthropology, politics and the history of science. For this reason it will be of interest to scholars and operators in a wide variety of disciplines and fields.

From the reviews: "Islamic Bioethics is based on Atighetchis Italian book *Islam, musulmani e bioetica* (Roma: Amando, 2002) but it is considerably enlarged and enriched by additional details. is not just an overview of Islamic bioethics but also of Atighetchis work. Islamic Bioethics is an introduction for a broad audience . is a valuable introduction to Islamic bioethics and gives a detailed overview not only on the major issues in Islamic bioethics but also on several minor issues." (Nils Fischer, *Journal of International Biotechnology Law*, Vol. 5 (4), 2008)From the Back CoverThis book presents a critical analysis of the debate at the religious, legal and political level sparked off by the introduction of new biomedical technologies (cloning, genetics, organ transplants, IVF, etc.) in Muslim countries. It compares the positions of "classic" Muslim law and contemporary religious authorities; laws in Muslim countries; the attitudes and concrete behaviour of populations, families and individuals, as well as the regulations of medical associations, bioethics committees etc.. The result is a mosaic of positions which are often different (including from the point of view of ethics) but all in pursuit of legitimisation according to the Koran and the Sharia. The work has an interdisciplinary approach, drawing on law, sociology, anthropology, politics and the history of science. For this reason it will be of interest to scholars and operators in a wide variety of disciplines and fields.
