Title description are accurate for book content By KeliI purchased this book as it is the required text for an MLIS class called "The Special Library". Although the class has nothing to do with special libraries, the textbook is very well written if one is interested in learning about Assistive Technologies for public and school libraries. The content could also be used for other situations in which people with disabilities need assistance using computers.

Simple, straightforward guidance for the practitioner who wants to use assistive technologies to extend library access. Tutorials on technologies for individuals with disabilities arranged by disability category 47 Microsoft Accessibility Options screenshots Extensive bibliographies for each disability category and for universal access, training, and marketing A glossary of assistive technology terms Extensive resources for each disability category
