This is a very important book for all of us. We need to change everything--especially our profit-driven economy--if we are to survive on this planet. The facts presented in this book are undeniable!

This book lays to rest the doubts about the human impact on the environment. It also lays out the details of how people made this mess and gives real examples of working solutions.

it's a really interesting reexamination (after Costanza, 1997) of the state of some endangered species, it's a wake-up for our consciousness. Nevertheless it could be perceived that the authors are not fisheries scholars but the text is ok for dissemination of knowledge of fisheries many problems

Although humans have long depended on oceans and aquatic ecosystems for sustenance and trade, only recently has human influence on these resources dramatically increased, transforming and undermining oceanic environments throughout the world. Marine ecosystems are in a crisis that is global in scope, rapid in pace, and colossal in scale. In *The Tragedy of the Commodity*, sociologists Stefano B. Longo, Rebecca Clausen, and Brett Clark explore the role human influence plays in this crisis, highlighting the social and economic forces that are at the heart of this looming ecological problem.

"Impressive and compelling. The historical, political, and ecological perspectives offered in *The Tragedy of the Commodity* are vital to understanding the link between the 'tragedy' inherent in many 'common property' situations."
