This full-color text explores the United States and Canada with a fresh, logical approach. The authors examine the regions of the United States and Canada using a thematic approach, via such topics as agriculture, industry, and population. This topical framework provides an insightful perspective for students to learn the similarities and differences that characterize the regions of these countries. Chapter 1, "Introduction," provides basic geographic background and places the United States and Canada in a global perspective. Then coverage of both countries is incorporated into each topical chapter, concluding with a separate chapter (14), "The Canadian Difference," which

looks at Canadian-specific issues, such as the English/French language debate.
