Brian Howard : When Things Go Boom! A Highly Practical (NO FLUFF!) Guide To What You Can Do Now To Prepare For The Coming Chaos: Techniques, Tips and Supply Checklists before purchasing it in order to gage whether or not it would be worth my time, and all praised When Things Go Boom! A Highly Practical (NO

FLUFF!) Guide To What You Can Do Now To Prepare For The Coming Chaos: Techniques, Tips and Supply Checklists:

1 of 1 people found the following review helpful. Simple, straightforward, and very useful!By NoconaI've bought a lot of books that are more detailed than this--but now when I recommend a "first book" for beginning preppers, this will be it! He delivers exactly what he promises...a book filled with ideas and items he has tested and found useful. What it doesn't have is a bunch of marginally useful detail (sometimes I think authors just want to impress us with their expertise). I got a lot of simple ideas that are amazingly missing in other books. In the areas I'm familiar with, his recommendations are right-on, so it makes me trust his other product recommendations. Will save me a lot of research time! Highly recommend this book!3 of 3 people found the following review helpful. Short to the point! The perfect book for the beginner (as well as experienced) prepper.By William C.I have been prepping for years, due to being in the hurricane belt, and wish I had found this book 10 years ago. When I first saw it, I almost passed it up due to the low price. I figured being less than \$10, probably meant little useful info. But the tag line "NO FLUFF" caught my eye. Boy was I surprised when I read it. I would have easily paid 2 or 3 times as much for it. I have read a multitude of preparation/survival books, the majority of which were filled with lots lots of information. Most of the time, too much information. I often finished reading, feeling overwhelmed not knowing how or where to begin the real work of prepping. This book, however, is written in a no-nonsense manner and filled with lots of check-lists. Each chapter tells you what you need, why you need it, and what to start doing today to get it done. Call it the cookbook approach, but it works. And truly NO FLUFF! Even after all my reading, I still found a few unknown pearls of wisdom in this book. I highly recommend it to anyone wanting to be ready for the future. And I look forward to any second edition which may be available in the future.0 of 0 people found the following review helpful. Solid Advice You Can Use ImmediatelyBy Alex ProsperI'm committed to taking my family's preparation up to the next level, so When Things Go Boom is a thorough guide that I really appreciated both for its direct style, its philosophical honesty and its wealth of tips, advice and guidance. There's a lot to think about. I like Howard's thinking on why mobility matters, and I'm really going to need to consider that. I really haven't thought about preparation needing to work both at one's home and if evacuation is compelled. I like how he offers specific recommendations on guns, knives and supplies--naming names and describing in detail pros and cons. The book has very detailed advice on many ways to acquire, treat and store water, and I'm making some strategic changes based on his treatment info. Other content is solid, especially on food storage rotation, emergency shelter and fire starting. I admit I really haven't thought through these topics to the extent the book showed me how to, including communication and transportation. So I have some work to do, and I appreciate the guidance!The book's organization is great, with each chapter ending with a list of items mentioned and a second list of things to do, acquire or practice NOW. There is an inspiring sense of urgency throughout the book, as well as one of responsibility and community, with the author several times suggesting working with others who are preparing in your community. All in all a great value and thorough guide.

Have you ever thought, "I want to get prepared, but I don't know how to start or what supplies to get", or even, "I don't have the time to do all the research, and I wish someone could help me"? If so, then this book is for you. When Things Go Boom! was written to be a no fluff guide as to what you can do today to begin getting prepared for the coming chaos or for any potential disaster. This book is chock-full of survival and preparation techniques, unique and valuable tips and supply checklists. They are broken down into practical areas such as personal defense and safety, water and filtration, food and nutrition, shelter and habitat, medical and first aid, communication and navigation, signaling and other general areas. More importantly, you are benefiting from the author's experience, research and testing of products. This allows for specific recommendations to be given about select products and manufacturers. He has done most of the research for you and only suggests products that he relies on, personally, for his own family's health and safety, saving you multiple hours of research and frustration. When Things Go Boom! not only tells you what supplies you need to be prepared, it tells you why you need them and where to get them. Howard has been prepping seriously since 2001 and knows first-hand what he is talking about. Being a military veteran, a Christian and a devout husband and father, Howard has the sole desire to help others prepare, just as he prepares for his own family. We live in an extremely fragile world right now, a world on the brink of economic, political, religious and societal collapse. Just the fact that you are reading this now, tells me that you are blatantly aware of this fact. What once was thought of as fringe thinking has now become mainstream certainty. It is coming and it is coming soon. The world will never be the same. Howard is not a man prone to paranoia or any extremist beliefs, he just sees what is coming, acknowledges what most of us already know in the depths of our being and is taking a stand for prudent preparedness. The time to prepare is not the day after disaster strikes. The time is now and, When Things Go Boom! will be the definitive book to help you get there.

About the Author Brian Clark Howard (New York, NY) is a Web editor at The Daily Green (www.thedailygreen.com), which is part of Hearst DigitalMedia and is one of the world's largest and most trusted sources for consumer

information on living a more environmentally friendly life. Brian was previously managing editor of "E/The Environmental Magazine", the oldest and largest independent environmental magazine in the United States. He has written for Yahoo!, MSN, "Plenty, The Green Guide, Popular Mechanics online, Men s Health, Mother Nature Network, Oceana, AlterNet" and elsewhere. Brian coauthored a book on geothermal heating and cooling, forthcoming from McGraw-Hill, and he wrote the chapter on green power and green lighting for the 2005 book Green Living (Plume), which he also coedited. Brian also wrote the chapter on saving energy for the 2009 book Whole Green Catalog (Rodale). Brian earned an MS in journalism from Columbia University and holds two bachelor s degrees in environmental sciences. Brian was a finalist for the 2005 Reuters/IUCN Environmental Media Awards and has appeared on numerous radio and television programs. He also blogs for Asylum and as the URTH Guy at The Daily Green. Bill Brinsky founded Envirolite Systems which focuses on lighting and energy, from design of new systems to energy efficiency upgrades of current systems. He previously worked for Con Edison. Seth Leitman is President and Managing Member of the ETS Energy Store, LLC (www.etsenergy.com), which sells organic, natural, and sustainable products for business and home use. Previously, he worked for the New York State Power Authority and the New York State Energy Research and Development Authority, where he helped develop, market, and manage electric and hybrid vehicle programs serving New York State and the New York metropolitan area. Seth is the co-author of "Build Your Own Electric Vehicle", Second Edition.
