There are lots of great tips about getting Wordpress set up and excellent examples of how libraries use it. I've worked with Wordpress in libraries in the past and wish I would have had this book as a guide.

This hands-on, practical book walks the reader through the entire process of setting up a WordPress website for their library, provides tips and best practices for using themes and library-oriented plug-ins, and contains information on how to use WordPress to create non-traditional library websites.

I enthusiastically recommend the Library Technology Essentials series. Many libraries will want to invest in the entire set as a professional development resource since they will inevitably face some degree of involvement with each of the volume topics. Library technologists will want one of these books at their side as they launch new projects or initiatives. Ellyssa Kroski has shepherded a collection that makes an important contribution to the professional practice of library technology. (Marshall Breeding, Independent Consultant, Speaker, and Author; editor Library Technology Guide editor, Computers in Libraries columnist, and Smart Libraries Newsletter editor)WordPress is not only the most popular blogging software in the world, but it is also a powerful content management system that powers over twenty-two percent of all new websites in the US. This free, open source application was downloaded 65 million times as of December 2011 and enjoys a robust development community which has developed over 22,000 plugins. Libraries are utilizing this technology to create community-oriented websites, blogs, subject guides, digital archives and more. This hands-on, practical book walks the reader through the entire process of setting up a WordPress website for their library, provides tips and best practices for using themes and library-oriented plug-ins, and contains information on how to use WordPress to create non-traditional library websites.About the AuthorChad Haefele is the Emerging Technologies Librarian at the University of North Carolina at Chapel Hill. As part of the User Experience Department, he explores evaluation and improvement of the campus libraries' web presence and other points of interaction with users. His areas of research interest include web development, usability testing, personal information management, ebooks, mobile devices, gaming in education, and location-based services.
